

Bioinformatics Seminar Series

Hosted by ICR-KUBIC and NPO Bioinformatics Japan

March 11th, 2022 (Hybrid)

16:00-17:30 at CB207

Contact: Hiroyuki Ogata (ogata@kuicr.kyoto-u.ac.jp)

Work & Private Life ~3 years post graduation from Ogata Lab.~

Yasutaka Kato

We will have a lecture by Yasutaka Kato, who graduated the master course (in CLS lab) in 2019. Yasutaka worked on human gut microbiome at Kyoto University and discovered “healthy triangles” composed of bacteria species living exclusively in healthy gut microbiota. Then he started to work in a pharma teck (Sato Pharmaceutical), but for the reason that we do not know, he quitted the company. He started some activity as a youtuber, but we don’t know much about what he is actually doing now. Yasutaka is a very nice person. Let’s hear his lecture on his experience outside Kyoto University after graduation.

Please join the lecture at 16:00 at CB207 (big room for ventilation) or through zoom link below.
